

3M SCOTCH-WELD EPOXY ADHESIVES

3M two-part formulations are available in Duo-Pak cartridges for dispensing with a manual or pneumatic 3M EPX Applicator.

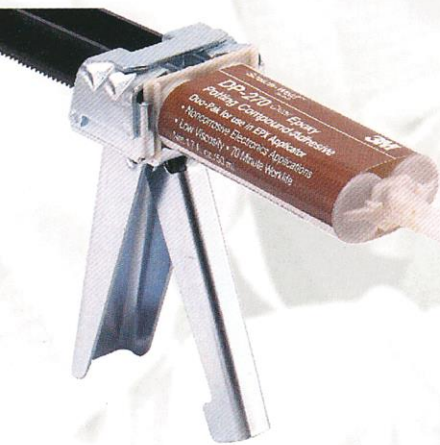

3M JET-MELT ADHESIVES AND POLYGUN APPLICATORS

Seal cartons without the added issues of dwell time, equipment and maintenance associated with hot melt glue, nor the safety issue surrounding the hot melt equipment need for applying glue.

3M LIGHT CURE ADHESIVES

3M Light Cure Adhesives offer an advanced new approach to bonding solutions. Their superior depth of cure, rapid cure speed and easy dispensability can save valuable processing time in both UV and visible light curing assembly environments.

3M SILICONE ADHESIVE

Silicone adhesive systems are compounded in a manner similar to that used for rubber-resin systems. The thermosetting reaction requires considerably higher temperatures. Proper compounding of the silicone adhesive is very important to provide a system with a good balance of internal strength and adhesion.

3M PRONTO INSTANT CYANOACRYLATE ADHESIVE

3M Cyanoacrylate Adhesive is a one component, high strength, extremely fast setting cyanoacrylate adhesive that cures quickly at room temperature. It is very economical to use because generally only drops of adhesive are needed. It has excellent adhesion to metals, plastics, rubber and produces bonds with more shock and impact resistance than most cyanoacrylate adhesives.
