

3M CARRIER TAPES

3M Carrier Tape with transparent static-dissipative cover tape helps protect static-sensitive components from electrostatic discharge, as well as physical damage.

3M PSA & HAA COVER TAPES

Pressure Sensitive Adhesive (PSA) is a type of cover tape used to cover surface mount components packaged in tape and reel. The strength of 3M's laminated PSA cover tape is significantly greater than typical Heat-Activated Adhesive (HAA) cover tape. PSA cover tapes bond securely on contact. This eliminates heater calibration time, helps save energy, and increase throughput. HAA cover tapes bond securely when heat and pressure are applied.
